Leg Ulcer Management and Resources - COVID-19 support

1. Compression Therapy

It is important to continue applying compression therapy, if at all possible, during this time to prevent leg ulcer breakdown and support healing.

If visits have to be reduced due to COVID-19 restrictions and/or staffing levels please consider swapping bandaging to:

- Leg ulcer hosiery kits
- Compression hosiery
- Compression wraps

As a last option if a family member/carer can be taught figure of 8 leg bandaging with K-Lite or Crepe then this could be undertaken at dressing changes until compression therapy can be reapplied to hold dressings in place securely.
