Your Colonoscopy Test at the Royal Hospital for Sick Children

A guide for parents and children

sore throat. This is normal and usually mild. Paracetamol can be used following the dosage instructions on the bottle.

Before we allow your child home we make sure there are no problems and they are able to eat and drink normally. You should be able to go home around 6pm. Occasionally some children have to stay in hospital overnight. If your child needs to stay, the reasons will be discussed with you. **You should bring an overnight bag just in case.**

**What happens next**
We will usually contact you by letter or phone about the results.

**What if there are problems later**
Phone the children’s Accident and Emergency (A&E) department on 0131 536 0206 or 0207 if you have any worries. Explain what test was done, which consultant did it and what is worrying you. If there is any doubt, bring your child to A&E.

**Your views on our service**
We will give you a questionnaire to ask your views on the overall endoscopy experience to help us ensure the service is the best it can be.

---

**Medicine and Instructions**

**Patient label**

**Medication label**

There are instructions with the medication, but we find Citramag should be made up in a jug with 200mls (7 fluid oz) of hot water and the sachet added to it. Allow the mixture to cool. It can then be flavoured with juice. Drink over half an hour. Please call if there are any problems.
Your colonoscopy test - what is it?
We have arranged for your child to come to the Royal Hospital for Sick Children for a colonoscopy test. We use a flexible telescope, called a colonoscope, which has a tiny camera and light on the end. This examines the lower part of the bowel (see diagram) looking at the large bowel (colon) and the end of the small intestine (ileum). We do the test with your child asleep (anaesthetised) so there is no discomfort or memory of the test. We usually have a look at the upper part of the bowel at the same time (upper endoscopy) - there is another leaflet about this.

Medical Records will send you the date of the test.

Getting ready for the scope test
To get the best look at the lower bowel, we need your child to take a medicine called Citramag to clear the bowel. Unless you are given the medicine by us, we would like you to see your GP to get a prescription for it as detailed at the end of the leaflet, with instructions on how to make it up and how much to take. The medicine is given at 5pm two days before the test is done. This allows your child to keep to their usual routine (school, nursery etc.). They will be able to eat normally during this time. Your child should be given more medicine at 9am and 5pm on the day before the test. On the day before the test, you should make sure they have good amounts of clear fluids and a diet of soups, puddings and more liquid soft foods, as they are more easily digested e.g. scrambled eggs, cereals, ice-cream, jelly and custard. Please call us if there are any problems.

On the day of the test
Our tests usually take place in the afternoon. On the day of the test your child should have a light breakfast such as white toast, rice krispies or cornflakes and any regular medications they are on before 8am. After 8am your child can have clear fluids to drink until you arrive on the ward. Please make sure your child knows what the test involves and how it will be done.

The medical and nursing staff on the ward will ask you a few questions. Your child will have some routine observations taken (weight, temperature, pulse and blood pressure). If anaesthetic is to be given through a vein (in the hand), a cream will be used to numb the skin over the vein at least an hour before the test.

The doctors from the gastroenterology and anaesthetic teams will see you on the ward, explain the procedure again and ask for your written consent. Any risks of the anaesthetic and the scope test will be explained to you as part of that discussion. You are welcome to ask as many questions about the test as you wish.

The test
You and your child will be taken to the anaesthetic room in theatre where the anaesthetist will either put a small cannula (tube) into a vein in the hand, or give your child a mask by which to breathe in the anaesthetic. Once they are asleep, you will be asked to leave, and the nurse will show you back to the ward where you can wait. In theatre, the scope is carefully passed up through the bottom end (anus) and round the bowel. Problems from this test are uncommon but the doctor taking the consent will explain all about the procedure and any other procedures that we might have to do.

After the test
Immediately after the test your child may be a bit sleepy. The doctor will come to see you after the scope list finishes and explain what they saw and any plans that are needed. There are usually no problems after the test but some children may complain of a sore tummy, windiness and
